LESSON **Reteach**

7-3 Logarithmic Functions

A **logarithm** is another way to work with exponents in equations.

If $b^x = a$, then $\log_b a = x$.

If b to the x power equals a , then x is the logarithm of a in base b .

Use the definition of the logarithm to write exponential equations in logarithmic form and to write logarithmic equations in exponential form.

Exponential Form $3^4 = 81$	Logarithmic Form $\log_3 81 = 4$
Logarithmic Form $\log_5 125 = 3$	Exponential Form $5^3 = 125$

If no base is written for a logarithm, the base is assumed to be 10.

Example: $\log 100 = 2$ because $10^2 = 100$.

Assume the base is 10.

Write each exponential equation in logarithmic form.

- | | | |
|--|---|--|
| 1. $7^2 = 49$
$b = 7, x = 2, a = 49$
$\log_7 49 = \underline{2}$ | 2. $6^3 = 216$
$b = 6, x = 3, a = 216$
$\log_6 216 = \underline{3}$ | 3. $2^5 = 32$
$b = 2, x = 5, a = 32$
$\log_2 32 = \underline{5}$ |
|--|---|--|

Write each logarithmic equation in exponential form.

- | | | |
|---|--|--|
| 4. $\log_9 729 = 3$
$b = 9, x = 3, a = 729$
$9^3 = \underline{729}$ | 5. $\log_2 64 = 6$
$b = 2, x = 6, a = 64$
$2^6 = \underline{64}$ | 6. $\log 1000 = 3$
$b = 10, x = 3, a = 1000$
$10^3 = \underline{1000}$ |
